

# Environmental Profile Sheet

The imageRUNNER ADVANCE DX C357iF/C257iF models incorporate Canon technologies. Canon has a strong environmental focus at every stage of the product life cycle—Produce, Use, and Recycle. The technologies below focus on Energy Conservation, Resource Conservation, and Pollution Prevention, and form the foundation of Canon’s Environmental Management System.

	Energy Conservation	Resource Conservation	Pollution Prevention
In order to help reduce dependence on petroleum-based materials, Canon uses <b>100% recycled plastics</b> .*			
A variety of sleep recovery triggers, including motion sensing, help <b>encourage the use of Sleep Mode</b> , helping to minimize power consumption.			
Power consumption in Sleep Mode is <b>as low as 0.80 W!</b>			
<b>Low Typical Electricity Consumption (TEC) values</b> , which measure power consumption during a one-week period.			
<b>Power consumption is reduced by utilizing White LED array technology</b> in its Color Image Reader versus using a traditional Xenon tube!			
RAPID Fusing technologies help <b>reduce power consumption</b> and <b>limit the warm-up period</b> .			
CS Toner, with its low melting point, helps <b>reduce fusing temperature requirements</b> .			
All suppliers are required to meet Canon’s stringent Green Procurement policy and environmental terms. This helps Canon exceed the tough European Union’s RoHS Directive, which <b>controls/restricts the use of certain hazardous substances</b> .			
Each system is equipped with paper-, toner-, and energy-saving features that help to <b>cut costs</b> and <b>conserve resources</b> .			
Long-life parts and high-yield supplies help <b>maximize uptime</b> and help <b>reduce the amount of materials consumed</b> during the product life cycle.			

\* Excluding a small amount of additives to improve physical properties.
